Nabonswendé Regis Epiphane ZONGO

Cybersecurity Engineering Student — SOC Analyst / Blue Team

International University of Rabat (UIR) — Cybersecurity Engineering Program, 5th year
epiphanezongo23@gmail.com | 06 64 13 90 96 | LinkedIn | GitHub | Portfolio | Salé / Rabat, Morocco

End-of-studies internship or pre-hire position in SOC / Blue Team — available from January 2027

PROFILE

Fifth-year cybersecurity engineering student at UIR, focused on operational defense: log analysis, alert triage, separating false positives from real threats, system hardening (Windows/AD, Linux) and rigorous documentation. Experience in critical infrastructure (PKI, OPC UA), web security auditing (OWASP) and AI applied to threat detection. Seeking an end-of-studies internship or pre-hire position in a SOC.

SKILLS

SOC, Detection & Blue Team: Log analysis (Windows Event IDs, /var/log/auth.log), alert triage, incident response, system hardening (Fail2Ban, PAM, SSH), SIEM/IDS-IPS fundamentals

Systems & Networks: Linux (Ubuntu, Kali), Windows Server, Active Directory, TCP/IP, Firewall, Cisco, system diagnostics

Application Security & Auditing: OWASP Testing Guide / Top 10, Burp Suite, OWASP ZAP, Nmap, CVE research (NVD, WPScan, Patchstack)

PKI & Critical Infrastructure: EJBCA, X.509 certificates, CMP, Global Discovery Server (GDS), OPC UA protocol, Docker, MariaDB

Development, Cloud & Data: Python, C, PHP/Laravel, FastAPI, React/TypeScript, Azure, Git/GitHub, NLP (DistilBERT), AES/RSA

PROFESSIONAL EXPERIENCE

Security Audit Intern (Penetration Testing) *10/08/2026 – 10/09/2026*
4D Business Consulting (4DBC) × IFGICT — Rabat

- Conducted 2 black-box web application security audits following the OWASP Testing Guide / Top 10: multiple findings rated by severity
- Combined automated scanning (OWASP ZAP) with manual verification (Burp Suite) to separate confirmed vulnerabilities from false positives; CVE research
- Documented each finding (evidence, impact, remediation recommendations) in 2 technical reports

Industrial Infrastructure Cybersecurity Intern *08/07/2026 – 08/08/2026*
DATAPROTECT — Business Unit Critical Infrastructure Cybersecurity

- Deployed and validated a PKI (EJBCA, MariaDB, Docker) integrated with a Global Discovery Server for OPC UA certificate management
- System-level diagnostics and identification of a functional defect in the GDS, with technical evidence and recommendations
- Built an overall validation matrix and analyzed lab ↔ production gaps (HSM, redundancy, monitoring)

Research Intern — Detection & AI Applied to Cybersecurity *29/06/2026 – 31/07/2026*
International University of Rabat (UIR) — Salé

- Research project on automated detection of disinformation content; data annotation (Label Studio) and exploratory analysis
- Model comparison (TF-IDF vs fine-tuned DistilBERT), statistical validation and FastAPI + React demo

Web Development Intern *07/2025 – 08/2025*
SEOCOM — Marrakech

- Independently developed a complete real-estate management application (Laravel/MySQL, MVC) in 4 weeks, after self-training
- Multi-role access (admin, agent, client, owner) with access control and protection of sensitive data (transactions, contracts)
- Multi-criteria search, dashboards, internal messaging, document automation and reporting

ACADEMIC PROJECTS (github.com/Renzo0023)

Enterprise OS Security Environment & SOC Analysis *Active Directory · Linux · Kali*

- Designed an isolated lab: Active Directory domain controller (Windows Server 2022) and Ubuntu server, facing a Kali attacker
- Full attack chain: Nmap reconnaissance, Kerberos/SMB enumeration, brute force, privilege escalation, RCE, persistence
- Detection through log analysis (Event IDs, auth.log), hardening (Fail2Ban, PAM, key-based SSH) and re-testing to validate the controls

Zigbee Protocol Security Analysis (IoT Simulation) *C++ · Arduino · Proteus*

- Built a smart-home simulation environment (Proteus/Arduino): coordinator, LM35/PIR sensors, attacker node
- Simulated attacks (replay, spoofing, command injection, DoS), then designed countermeasures (authentication, AES-128, anti-replay)

Cloud Attendance — Facial Recognition Attendance System *Microsoft Azure*

- Serverless Azure architecture (Python Functions, Face API, MySQL, Blob Storage, SendGrid) with a React web interface
- Automated pipeline: face detection (Face API), local identification (DeepFace), PDF report and email delivery

EDUCATION

International University of Rabat (UIR) — Salé, Morocco *2025 – Present*
Cybersecurity Engineering Program (5th year)

École Marocaine d'Ingénierie (EMG) — Rabat, Morocco *2024 – 2025*
Computer Engineering Program

CPGE La Salle — Ouagadougou, Burkina Faso *2022 – 2024*
Preparatory Classes for Engineering Schools — Mathematics & Physics (MP)
